Geography students at St Ivo School were introduced to some rainforest residents including boa constrictors, kookaburras and tarantulas on February 5.

The session, run by Amazing Animals which specialises in animal handling workshops, showed the Year 9 pupils how the creatures have adapted to

their environment.

The hour-long experience aimed to help students understand ecosystems and the importance of rainforest conservation; topics they are currently covering in class.

The two handlers also brought along iguanas and squirrel monkeys for the children to study.

Nightclub owners given go ahead for flat conversion
